

[SDS \(Safety Data Sheets\)](#)

Availability and ready access to Safety Data Sheets (SDSs) is a requirement under [OSHA Hazard Communication](#) and [lab safety](#) standards. Safety Data Sheet contains detailed information including risk and hazards associated with a specific chemical and is unique to each manufacturer. While [electronic access](#) is acceptable, chemical users are required to maintain hard copies of the appropriate SDS for high hazard and frequently/large volume used chemicals. Researchers must review contents of the SDS before placing a new order, using chemicals in a new experiment, or modifying an existing experiment. Bookmark and use the link below to the “MSDSonline” program as your SDS search tool:
